

Joining the Dots in Ehlers-Danlos Syndrome: Issues with all Tissues

The talk will focus on the wide range of systemic manifestations of this poorly recognised but not uncommon complex condition and enable osteopaths to recognise the features that are present in their patients in their own Practice.

Dr Kate Barnes has been a GP in Bucks for 30 years. She has always been interested in the interaction of the mind & body in medicine & views them as one entity. In the last 10 years she has developed a portfolio career combining Cognitive Behavioural Therapy & Medical Hypnosis with Clinical Medicine. She was diagnosed with Hypermobility Ehlers-Danlos Syndrome in 2015 & has subsequently developed a special interest in this syndrome with an imperative to help educate others in diagnosing this condition. This will enable patients to get the help they need so they can learn how to best look after themselves with this connective tissue disorder.'
